### Pass-Thru Placement for Building-in

When placing a pass-thru refrigerator between two rooms, size the opening to fit the width of the cabinet. From front to back, the flange between the top covers indicates the separation between the clean room and ante-room (control) sides. The refrigerator should be positioned so that the wall header is over the solid cover, but not over the flange or the blue bezel. A minimum overhead clearance of 8" (204mm) is required on the ante-room side of the cabinet. Zero clearance is required above the clean room side, as well as on the left and right sides of the cabinet.

### NOTICE

If adding Trim and/or Skirt kit(s) to the unit(s), kit dimensions must be considered prior to building-in.

### Wall Header Placement and Required Clearances Shown from ante-room (control) side. Appearance may vary.

### Optional Trim Kit and Skirt Kit Placement Shown from clean room side. Appearance may vary.

**Trim Kit**  
Attaches to the wall around cabinet. Top piece extends across 3" x 81.8" full width of unit; may be installed on the clean room or ante-room side.

**Skirt Kit**  
Attaches to the underside of cabinet. Front piece extends across full width of unit; may only be installed on the clean room side.
