

SOLO™ Robotic Pipettor

Ahead of the Curve.

The SOLO™ Automated Pipettor and SOLOSoft™ control software offer unsurpassed ease of operation, precision & integration with 3rd party instruments.

The SOLO is designed and manufactured by Hudson Robotics which has over 33 years of laboratory integration experience. Hudson's SOLO is a low cost, flexible and easy-to-use automated pipettor. Available options include 4, 6, 8, 10, or 12 nests on the deck and with single, 8- or 12- channel Pipettors. The SOLO can be programmed to perform the tedious task of pipetting for better repeatability than manual methods. Equipped with a broad dynamic volume range, the SOLO can be loaded and operated manually. It can be integrated with the Hudson PlateCrane EX and SciClops robotic arms or arms from 3rd party manufacturers for 24/7 operations. The open access to the deck of the SOLO allows 3rd party instruments to be placed on top of the deck or to either side of the deck of the SOLO. An optional Microplate Gripper can be added to move microplates among nests or instruments. The SOLO provides researchers with walk-away freedom.

The SOLO includes SoftLinX lab automation software for building simple or complex application-based workcells and for data tracking, traceability, and auditability. SoftLinX lab automation software has software integrations to over 200 3rd party lab instruments. Hudson's software team can write custom integrations as needed.

SOLO™ Robotic Pipettor

The SOLO™ easily fits on the lab bench and in standard fume hoods, anaerobic chambers and biosafety cabinets. It can automate large and small volume experiments, is adaptable to SBS footprint microplates as well as flasks, tubes, and bottles. The SOLO will save valuable time and reduce errors inherent in complex, repetitive pipetting. Optional deck accessories, stackers and bulk reagent dispensing give the SOLO all the features users demand in an automated pipettor. The SoftLinX Player software with Guided Operations (GO) technology provides technicians with pictures and a task list to easily run protocols they may never have seen before.

- 8-, 24-, 96- & 384- well microplate compatible
- Compatible with a wide variety of plates, vials and reagent reservoirs
- Dispense above the well, tip touch or set mix protocol
- Broad volume range: 1uL to 1,000uL for the multi-tip heads
- Easily fits in a standard hood, and anaerobic chambers
- Fully compatible with robot loading systems or can be used manually as a stand alone unit
- Plate stacker upgrade available anytime for unparalleled flexibility and high throughput
- Easy to use SOLOSoft control software for simple programming of pipetting steps
- Seamless integration to SoftLinX and the SoftLinX Player with GO technology

The **SOLO** Robotic Pipettor

Applications

The SOLO™ is the ideal benchtop pipettor for a variety of applications. The SOLO offers the following fully-developed applications, including:

- Serial Dilutions
- Hit Picking
- Kinase assays
- ELISAs
- DNA Extraction
- DNA Normalization
- Next Gen Sequencing Prep
- Gene assembly

Synthetic Biology Workstation

DNA Extraction Workstation

SOLO Specifications

Dispensing: Single channel: 1uL to 10 mL; optional pump assembly for bulk dispensing
8 & 12 channel : 50 uL, 100 uL, 200 uL, 300 uL and 1,000 uL pipette heads

Plate Capacity: 4 to 12 on-deck positions; up to 4 additional positions off deck

Plate Format: SBS footprint; 8-, 24-, 96-, 384- shallow well and deep well; inquire for custom nests

Housing Material: Powder-coated aluminum main deck; painted steel upper arm covers; machined aluminum structural components

Spill Protection: No electronic components subject to spillage

Size: 21"W x 21"D x 22"H (Standard 6-position deck model)

Weight: 60lbs.

Computer Interface: RS-232

Accessories:

- Plate stacker and/or robotic arm
- Shaker nest
- Liquid level detection
- Integrated bulk reagent dispensing
- Thermal cycler
- Filtration station
- Heating/Cooling nests
- Magnetic nest
